Welcome to Gamespace.

This is nothing new, you’ve lived in it your whole life. A subtext of wins and losses, on a path toward some end state. What end state? Who writes these rules?

(Win) The War on Digital Sovereignty.

Few things have been as influential on our modern lives as the internet. It has successfully eaten most of the world and the feedback loops are speeding up. We’ve fought for human rights, and civil rights - and now we must stand for our digital rights. This will not be given to us. Incumbents will not loosen their grip voluntarily, in fact they will tighten it when they feel their ability to hold onto their way of doing things weakening. And it is weakening. The state of digital technology is no longer just products and services - it will shape lifestyles and livelihoods. We must not give it away our future.

(This time we) Move Slow and Fix Things.

The rally cry of disruptive Silicon Valley startups was “Move Fast and Break Things”. Now we live in a world where many things are fundamentally broken. Our rally cry is the opposite. We must now plant the trees which will provide the shade for the future generations

(Be) Architects of the Future.

We build things for people who build things. Technology is tooling. It has no inherent value in and of itself, it is up to us how we use these tools. We are not called to be victims of the future, we are meant to create it...and we all have to live with what we create. We can't keep sidelined humanity, so now we, the people, must create a different outcome. With web3 we have the tools to build something better.

(Be) A Movement of Leaders, Who Act like Owners.

There are few things more powerful than gathering a generation of people around an idea, and giving them skin in the game. We will create the greatest movement of all time, by giving people skin in the game - right at the time that we all need to make a huge pivot in how technology is being designed into our future.
(Advocate for) the Player as the Sovereign Individual.

Sovereignty brings value over your own identity and data. The ability to live your life on your own terms. This comes with accountability, but is worth it’s weight.

(Open) the Metaverse.

The Metaverse is far too important to get wrong. Not everyone understands this, or agrees on what getting it right looks like. Web2 succeeded financially, but is not healthy on our minds or our planet. People are waking up to the significance of the Metaverse on our future. Who owns that future? What kind of world do you want to live in? What kind of world do you want to leave to others?

Remember, many Davids defeat a few Goliaths.
